

# OSTRATICKÝ

special agricultural machines for vineyards and orchards

## Multipurpose cultivator with possibility of deep fertilising

- for liquidation weeds and soil cultivation
- for deep cultivation with application of fertilisers
- for grass turf cut down

The basis of new multipurpose cultivator OSTRATICKÝ is subsoil cultivator for deep cultivation and draining soil with possibility of mounting additional

fertilising aggregate for liquid or pellet fertilisers. Both of fertilising aggregates are equipped for fluent adjusting of fertilisers dosing and big container make sure the high working performance. After add the cultivation tines with

wide wing-shaped shares its possible to use the frame of deep soil cultivator for other important works in vineyards and orchards - weed liquidation, interrow

cultivation or cutting down grass turf. The unique, by OSTRATICKÝ developed system for exchange position of cultivation shares make possible using one working tool for more operations and decrease the purchase charges to minimum. Multipurpose cultivators OSTRATICKÝ are produced with possibility of adjusting working width from 140 to 230 cm with cultivation shares and 100 to 180 cm

with deep soil cultivation tines. Working depth is possible to change easy depend on factual working conditions and needs for concretely working operation. With the right choose of pushing (tubes) or crushing (rods) roller is possible to reach optimum working results in all types of soil and working conditions. On question is possible to equip the frame of cultivator by set of disc section for ploughing towards and ploughing away.
