special agricultural machines for vineyards and orchards

Hydraulic pusher

Pusher of props from OSTRATICKY firm serve for an easy pushing of props, posts, and supporting frames in vineyards and orchards, but even for building of fences and other supporting frames. Props and posts are pushing directly if the soil is soft or to the holes. The hole must be prepared beforehand, by advance mechanical or hydraulic drill. The pusher is equipped by hydraulic drill. The pushing cylinder with height of stroke 1.0 m use the internal hydraulic circuit of tractor without additional control valves here. Pusher is possible to take to the side of tractor. As an optional equipments it's possible to have hydraulic side shifting or slope adjusting.
