special agricultural machines for vineyards and orchards

## Rotary stripe cultivator PPF 450

The rotary stripe cultivator by OSTRATICKÝ is a new equipment complete the line of machines and equipments for the soil cultivation in vineyards and orchards. In contradistinction to a swinging section it's intended only for the fitting to the rear or front three-point attachment of the tractor. Machine is powered by the PTO drive shaft without the additional hydraulic circuits. Two supporting wheels with the fluent high-correction are very stabile and make possible the fine control of working depth. It means this machine is possible to use for the deep loosening and cultivation at the same way as for the cultivation around the plants with surface roots. The working width is possible to choose from 40 cm up to 85 cm. For better work and finale cultivation between plants it's possible to the same frame add the hydraulic swinging knife section.
