

OSTRATICKÝ

special agricultural machines for vineyards and orchards

Double-side hydraulic swinging sections

The OSTRATICKY company is the leading producer of special machines for winegrowing and fruitgrowing in the middle and east Europe countries. Long-time experiences and practise in this branch make possible design and production special equipments intended for work in the agricultural large-scale production.

Typical representative of the large-scale production machines is construction of double-side swinging section for weed liquidation and soil preparation of in-row place in vineyards and orchards. Basic model of equipment consist from universal carrying frame equipped by two pieces of passive swinging knife sections, which is possible, in case of mounting to a tractor with enough power of hydraulic system, complete by

active power harrow or use the special active swinging section with loosening tines or rotating discs (loosening or discs swinging section). Basic model is possible modify with many accessories for increasing the user comfort, as for example hydraulic side shift of arms for more easy adjusting the working width or additional hydraulic aggregate for work with older types of special tractors.

Unique solution offer the carrier of swinging section with powerful hydraulic aggregate integrated direct to carrying frame. This machine is intended first of all for rear mounting to three-point hitch, but it's possible to use it for front mounting too. It's suitable especially for aggregation with older types of special narrow tractors, don't equipped by enough powerful hydraulic system. Thus equipped machine is very compact and it's possible to use it in very narrow vineyards too. On question is possible to modify this model with many accessories too.
