special agricultural machines for vineyards and orchards

## One-side knife trimmers COMPACT - PN1, PN2

Take advantage of technology we bring you:

- universal mounting on one lifting post
- knives with special designed edge
- hydraulic height and inclination adjusting
- shock protection on vertical and upper trimming bar
- independent high adjusting of upper trimming bar (L-frame)
- hydraulic shock protection of rotors
- using the lifting post for other equipments

Type	No of upper knives	No of vertical knives	No of bottom knives
PN1 240	2	4	0
PN1 250	2	5	0
PN2 241	2	4	1
PN2 242	2	4	2
PN2 251	2	5	1
PN2 252	2	5	2

The facing knife trimmers COMPACT are made from the new and modern materials. In contradistinction to S 1.4 m the ground girders are made from stainless steel profile with steel frame. The number of cutting knives is different too. Knives are shorter and their spin is higher. But the main advantage is in possibility to tilt the upper and bottom part. It means to have cutting length from 1.5 m (and two side arms) to 2.4 m (without side arm). Working angle of upper and bottom part is adjustable and the trimmer is equipped by security coupling on upper and vertical trimming bar too. Trimmer can be used as an additional mechanism to all types of tractors equipped with a hydraulic system which supplies enough oil at the optimal working pressure. Thanks to the universal design of operating elements and the suspension on tractor it is possible to use the front suspension of the trimmer for gripping other equipment as vines stem cleaner etc. Possible as double-side too.
