special agricultural machines for vineyards and orchards

## One-side knife trimmer STANDARD S 1.4 m

Take advantage of technology we bring you:

- universal mounting on one lifting post
- knives with special designed edge
- hydraulic height and inclination adjusting
- simple and robust construction
- using of lifting post for other equipments

The front fitted knife trimmers by OSTRATICKÝ firm are established for summer treatment of growth in the vineyards of arbitrary span. Machines are set for trimming of green twigs and are based on the cutting by rotating edges. At the same time it is possible to crush the cutting matter by a mulcher. The combination of these two operations can pass the time necessary for treatment of growth. The lever system in the cab of tractor provides an easy control of all working elements. So a driver can set the trimmer to a height and inclination according to the growth. The trimmers are equipped with a number of vertical knives (with cutting edges) and with one or two horizontal ones. They are powered by a rotating hydraulic motor. The trimmer can be used as an additional mechanism to all types of tractors equipped with a hydraulic system which supplies enough oil at the optimal working pressure. Thanks to the universal design of operating elements and the suspension on tractor it is possible to use the front suspension of the trimmer for gripping other additional mechanism. In this way you can utilize your investment as much as possible.
